Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Waddoups et al (6,074,993), alone or in combination with Meinhardt et al (4,234,435).

Waddoups et al ["Waddoups"] disclose a lubricating oil composition which comprises (a) an oil of lubricating viscosity, (b) at least one calcium and magnesium overbased detergent, (c) an oil soluble dimeric molybdenum compound, (d) an oil soluble organic trinuclear molybdenum compound, and (e) at least one zinc dithiophosphate compound. Waddoups teaches that suitable base oils include one or more of the base stock groups or mixtures of the base stock groups set forth in the API publication including Group I basestocks. See column 1, line 62 to column 2, line 24. Suitable molybdenum compounds for component (c) include molybdenum dialkyldithio-carbamates (see column 5, top) which may be used in an amount to provide up to 2000 ppm molybdenum, preferably 400 to 2000 ppm molybdenum. Waddoups teaches that suitable trinuclear molybdenum compounds, component (d), also include dithiocarbamates which may be present in an amount to provide 10-350 ppm molybdenum. See column 7, lines 13-23. In addition, the phosphorus content from the zinc dithiophosphate should be from about 0.025 to about 0.1 weight %. See column 9, lines 6-11. The composition may also contain conventional additives such as succinimide dispersants (column 9, lines 43-57) and various

Art Unit: 1764

antioxidants including sulfurized hydrocarbons and diphenylamines. See column 10, lines 30-43. Meinhardt et al ["Meinhardt"] is added to show that applicant's specific succinic dispersant in a conventional lubricant additive. Thus, all of the components of applicant's claims are taught by the prior art and applicant's open-ended claim language "comprising" allows for the addition of other additives to the composition such as the detergent component of Waddoups. The examiner is of the position that Waddoups alone, or in combination with Meinhardt, meet the limitations of the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
